

# NextGen Clinical Trial Investigator Training

The Next Gen Precision Health Clinical Trial Investigator Training is a five-session educational program designed for investigators who currently lead or would like to lead clinical trials. The series includes lectures and panel discussions from leaders across the University of Missouri system, as well as Washington University in St. Louis, to define the regulatory, operational, and ethical components of clinical trials, with the goal of developing a skilled workforce that provides the highest level of patient safety, teamwork, and data quality. The program also covers institution-specific resources for investigators.
